DATA ANALYSIS SOFTWARE FOR
FINANCIAL FRAUD

ASTRA

AUTONOMOUS **S**OFTWARE FOR
TRANSACTION **R**ESPONSE AND **A**NALYSIS

Financial Data Analytics Software

Version: 1.1

Date: December 9th, 2023

Designed by: Virraaj Gupta, Aman Jain, Advait Iyer, Vaibhav Kapoor

1 Knowledge Graphs and Databases

- Generated from various datasets
- Contain information about various entities, their relationships and transactions.

2 Data Collection Phase

2.1 Web Scraper

- Automate data collection from the internet

2.2 Data Collection Wizard

- Embedded in the front-end interface
- Enables users to upload datasets

3 Application Programming Interface

- Facilitates all data flow to and from the system

4 Data Preprocessor

- Transforms raw datasets and live data-streams, making them suitable for analysis

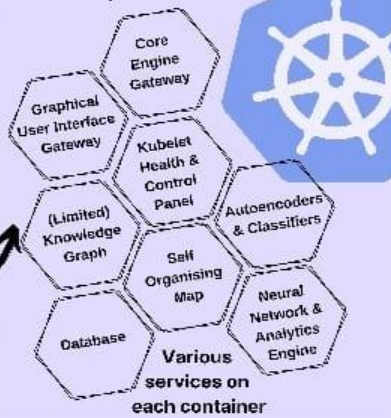

5 Deep Learning and Analytics Engine

- Enables automated data analytics, entity identification, pattern recognition and behaviour modelling
- Manages knowledge graphs
- Responsible for the trust score matrix
- Facilitates anomaly identification & fraud detection

6 Kubernetes Cluster

- Monolithic-Microservices Hybrid architecture

7 Front-end Interface

- Enables responsive, interactive knowledge visualisation and reporting
- Real-time interface facilitates enhanced pattern discovery
